

Specific analyses of the SCRIP interpolation
library for OASIS coupler

G. Jonville, S. Valcke, L. Coquart, E. Maisonnave, A. Piacentini

Working Note august 2018

CECI, Université de Toulouse, CNRS, CERFACS

WN-CMGC-18-93

The SCRIP interpolation library defines the multiplication matrix used by OASIS to interpolate coupling fields between different model grids.

This working note presents the following points:

- 1) Interpolation error obtained with the SCRIP library in OASIS3-MCT_3.0
- 2) Interpolation error obtained with the SCRIP library in OASIS3-MCT_4.0
- 3) Impact of Lambert projection near the poles
- 4) Review of weights generated for the CONSERV FRACAREA remapping

This table shows the different types of interpolation (or remapping) techniques applied to specific source and target grids for interpolation analyses:

Source grid	Target grid	Bilinear	Bicubic	Distwgt(1)	Conserv 1 st	Conserv 2 nd
nogt (e-ORCA1)	ssea (t127)	×	×	×	×	×
ssea (t127)	nogt (e-ORCA1)	×	×	×	×	
nogt (e-ORCA1)	bggd (lmdz)	×	×	×	×	×
bggd (lmdz)	nogt (e-ORCA1)	×	×	×	×	×
nogt (e-ORCA1)	icos (n15212)	×	×	×	×	×
icos (n15212)	nogt (e-ORCA1)			×	×	

1) Interpolation error with the SCRIP library in OASIS3-MCT_3.0

The interpolation errors obtained with OASIS3-MCT_3.0 (branch "trunk", revision 2133) are summarized on these figures:

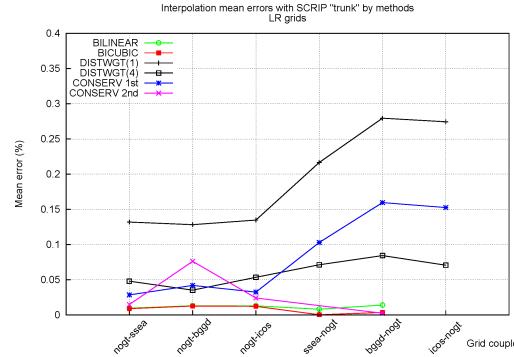

Figure 1: Mean interpolation error

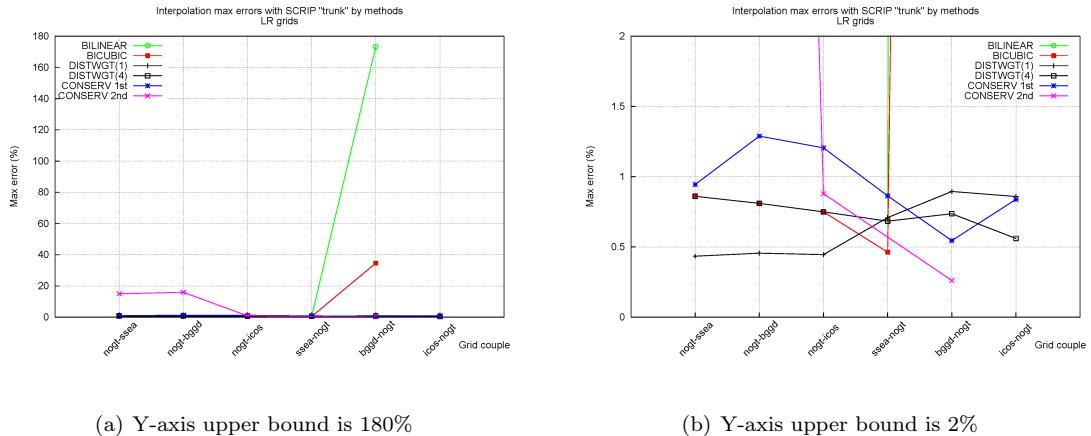

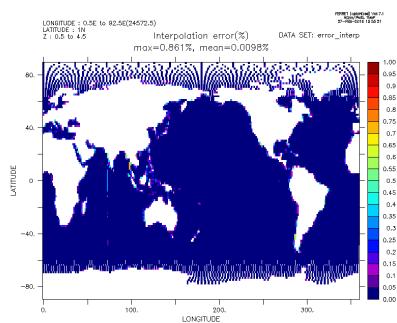

Figure 2: Max interpolation error

The following pages show plots of geographical distribution of the interpolation errors on target grid for each couple of grids and each type of interpolation technique.

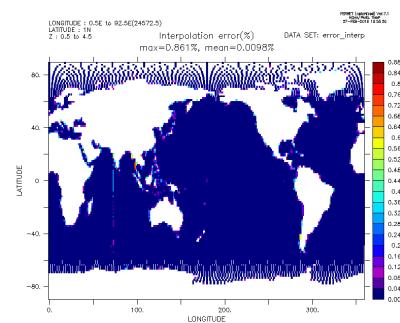

The first column shows the error between 0 and 1, the second column shows the error between 0 and the maximum case error, and the third column shows target grid points which did not receive a field value because of mask considerations.

2) Interpolation error with the SCRIP library in OASIS3-MCT_4.0

The interpolation errors obtained with OASIS3-MCT_4.0 (branch "before4", revision 2324) are summarized on these figures:

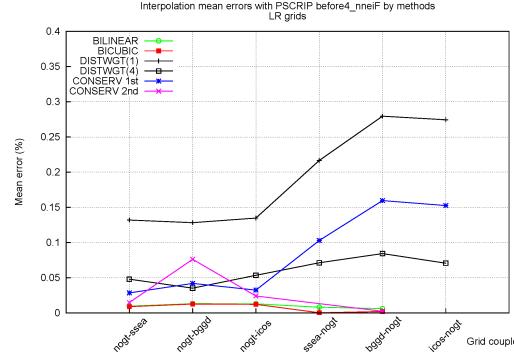

Figure 3: Mean interpolation error

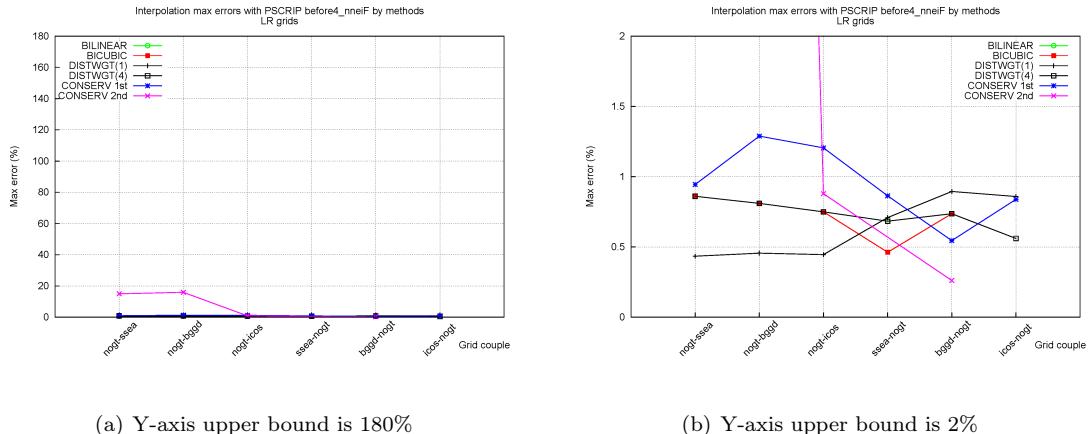

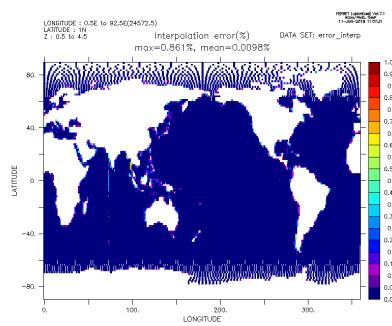

Figure 4: Max interpolation error

The following pages show plots of geographical distribution of the interpolation errors on target grid for each couple of grids and each type of interpolation technique.

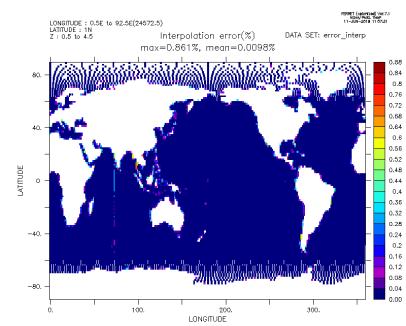

The first column shows the error between 0 and 1, the second column shows the error between 0 and the maximum case error, and the third column shows target grid points which did not receive a field value because of mask considerations.

3) Impact of Lambert projection near the poles

This paragraph shows a focus on interpolation errors at poles (obtained with OASIS3-MCT_3.0) to analyze the impact of Lambert projection.

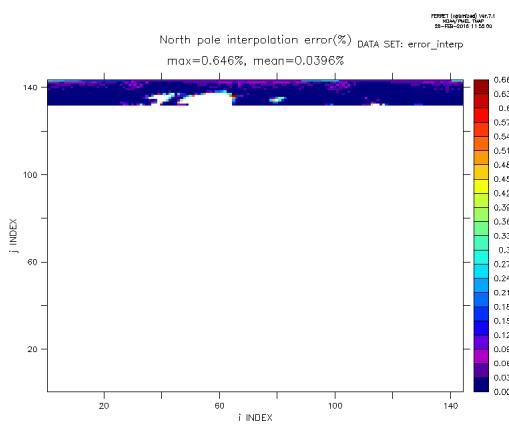

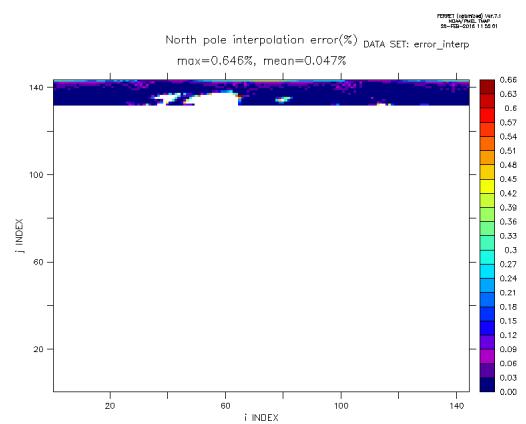

For the north pole, the first column shows the interpolation error without Lambert projection (north latitude threshold = 2 rad), the second column shows the interpolation error with Lambert projection (north latitude threshold = 1.45 rad)

3.1 Interpolation errors at north pole

4) Review of weights generated for the CONSERV FRACAREA remapping

This paragraph is a review of weights generated for the CONSERV FRACAREA remapping with or without Lambert projection near the north pole in OASIS3-MCT_3.0.

4.1 nogt → ssea

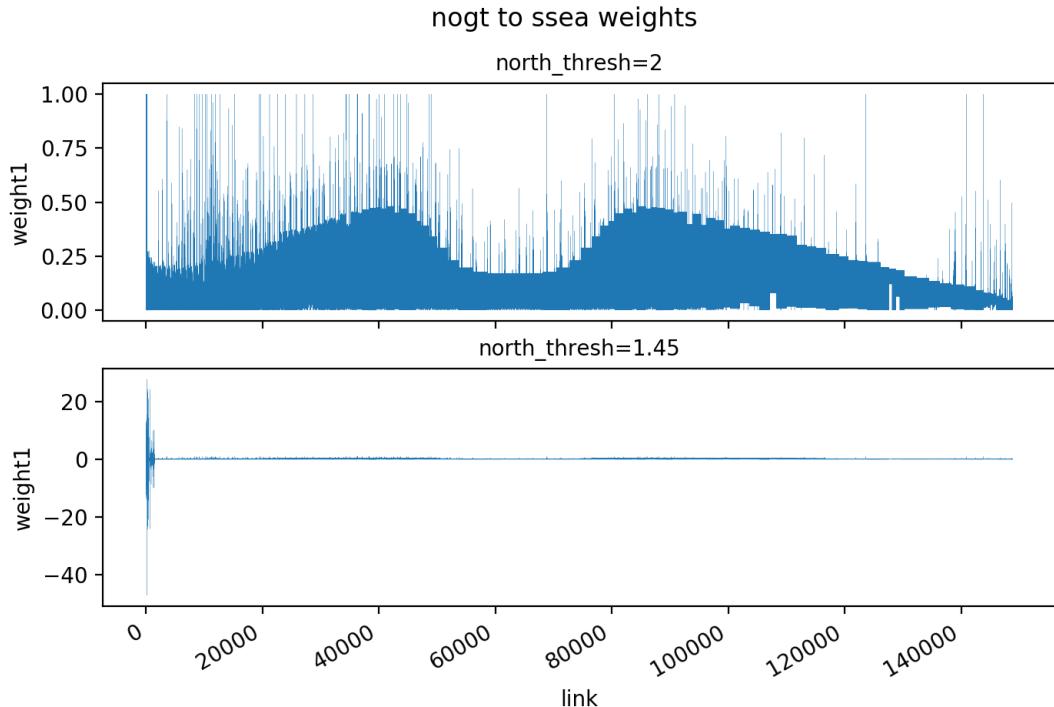

Figure 5: nogt to ssea weights with $\text{north_thresh} = 2 \text{ rad}$ (up) and $\text{north_thresh} = 1.45 \text{ rad}$ (down)
